

Kawasaki Ninja1000SX Muffler for pannier case (Supplement)

© Our pannier case compatible muffler has been developed and tested with the heat shield attached to the pannier case, and has been commercialized.

(In the case of a genuine muffler, a heat shield is not required.)

Due to the change in the part number of the pannier case for Ninja1000SX, the heat shield is no longer included.

Since it is no longer possible to purchase only the heat shield plate, attach a "heat shield sheet" to prevent the pannier case from melting due to exhaust heat.

*** It is recommended to install a heat shield.**

Even if you attach the heat shield sheet, the temperature inside the pannier case (especially the bottom surface) may rise higher than the heat shield plate during traffic jams or in the summer when the temperature is high, so please be careful.

As shown in the photo on the left, cut and attach the heat shield sheet according to the shape of the underside of the pannier case.

2 pieces (left and right) are 200 x 150 mm 4 pieces one side (right side) is 200 x 150 mm 2 sheets

Precautions : Thoroughly degrease the surface to be attached.

With a heat insulating sheet attached

With the heat shield attached

If you put your luggage in the pannier case, it will hang down due to its weight, so please secure a clearance of about the red arrow.
